

STATE FACTSHEET

Wyoming

2017

ATSDR received a request from the director of Casper/Natrona Health Department (NCHD) to provide technical assistance in reviewing results of indoor air samples collected in a school building. ATSDR has been working with NCHD and the Natrona School District to address public health concerns related to indoor air contamination from nearby oil well field operations. ATSDR provided technical assistance and ongoing data review was provided for the school district by ATSDR. Students were out of the school for one entire school year but returned in fall 2017. ATSDR continues to review monthly air monitoring reports from the school district contractor. CO2 has risen again and may require upgrade to the mitigation system.
